Visualising social networks

Prepared and developed by Aneesha Bakharia

Installation Instructions can be found at: <u>http://olt.ubc.ca/learning_tools/research_1/research/</u>

This document provides some brief instructions on setting up social network visualisations. The document covers both BlackBoard Vista (formerly WebCT) and BlackBoard 8.0.

BlackBoard Vista (WebCT)

WebCT, by default limits the number of posts displayed per page. The SNA tool is only able to analyse data on that is displayed on a single page. In order to analyse a large forum, change the Paging Preferences to an appropriate number eg 200 posts per page. The Paging Preferences icon is displayed at the bottom of the forum page.

A graph of the social network is displayed.

A graph layout algorithm can be applied to assist with network visualisation. Select Layout, Graph-Theoretic Layout, Spring embedded from the menu. The Spring –Embedded dialog is displayed. Use the default values and click Ok.

The social network/graph is rearranged.

The number of posts between each person was also exported. This data can be displayed to help identify week and strong relationships. Select Lines, Size, Tie Strength from the menu.

Select Strength an click OK.

Blackboard

When you visit a Blackboard forum, a "Perform Social Network Analysis" link will be injected. Click on the link.
